

artouche puzzles

addition

multiplication

subtraction

division

Put the digits 1, 2, 3, and 4 in each row and each column. Follow the colour code above to determine the operators used in each zone.

For example, the row above looks wrong because $(1+2) \times 4 \times 3 = 36$. The line below looks better because $(1+4) \times 2 \times 3 = 30$.
